1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

IN THE SPECIFICATION:

On page 1, the continuing data has been updated to include the phrase --, now U.S. Patent 6,721,143, issued on April 4, 2004-- directly before the end of the continuing data sentence.

2. The following is an examiner's statement of reasons for allowance: The prior art of record neither anticipates nor renders obvious the instant combination in a spin valve recording head having: a first dielectric layer on a magnetic shield; on said first dielectric layer, a GMR enhancing seed layer; on said seed layer, a first antiferromagnetic layer; on said first antiferromagnetic layer, a bottom spin valve pedestal that further comprises a capping layer on a free layer on a non-magnetic spacer layer on a pinned layer, **said pedestal having sidewalls that slope outwards away from the capping layer; a part of the pinned layer, away from the capping layer, having been removed; on the sidewalls, a decoupling layer that is between about 30 and 50 Angstroms thick; on the decoupling layer only, a first layer of soft ferromagnetic material; on said first layer of soft ferromagnetic material only, a second antiferromagnetic layer; on the second antiferromagnetic layer, a conductive lead layer that overlaps the first soft ferromagnetic and second antiferromagnetic layers and contacts the capping layer; and on the capping layer and conductive layer, a second dielectric layer.**
